Project Title: Toy Craft Tales: Tableau's Vision into Toy Manufacturer Data

Project Design Phase-I - Solution

Team ID: LTVIP2026TMIDS81710

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Toy manufacturing companies, factory managers, production planners, business analysis and deciso-kees who need to analyze production, sales, inventory.Cand quality data to improve operational efficiency and business performance.

6. CUSTOMER CONSTRAINTS — CC

Limited technical expertise, time constraints, budget limitations, resistance to change from traditional methods, and lack of centralized data systems.

5. AVAILABLE SOLUTIONS — AS

Traditional methods such as Excel sheets, manual reports, basic MIS systems, and static charts that provide limited insights and require more time for analysis.

Explore AS, differentiate

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

- Monitor toy production performance
- Analyze sales trends and demand patterns
- Manage inventory efficiently
- Identify defective products and Quality issues
- Make quick and accurate data-driven decisions

9. PROBLEM ROOT CAUSE — RC

The root cause of the problem is

Fragmented data storage across that Jlultiple systems, lack of advanced visualization tools, and depeneece on manual data analysis methods that delay decision-ms-

7. BEHAVIOUR — BE

Customers manually track data in spreadsheets, review periodic reports, hold frequent meetings to ure-derstand issues, and rely on experience rather than rea-lı-time analytics for decision-making.

Focus on J&P, tap into BE

3. TRIGGERS — TR

Toy manufacturers are triggered to act when they experience frequent production delays, excess inventory or stock. shortages, increased defective toys, declining sales, and difficulty in understanding large volumes, of manufacturing data, spread across multiple systems.

4. EMOTIONS. BEFORE / AFTER — EM

Before: Confused, overwhelmed by data, stressed due to poor visiblity and delayed decisions.
After: Confident, informerd, and in control with clear visual insights and data-driven decisions.

7. BEHAVIOUR — BE

Customers manually track data in spreadsheets, review periodic reports, hold frequent meetings to understand issues, and rely on experience rather than real-time analyileics for decision-making.

Identify strong TR & EM

3. TRIGGERS — TR

Toy manufacturers are triggered to act when they expe-exeitent frequent production delays, excess inventory or stock shortages, increased defective toys, declining sales, and difficulty in understanding large volumes of manufacturing data spread across multiple systems.

4. TRIGGERS — EM

Toy manufacturers are triggered to act when they experience frequent production delays, excess inventory or stock thentoors, shortages, increased defective toys, declhing sales, and difficulty in tin unspmstentadfnaersecsions of manufacturing danat ressutencs, carivent cialness.

4. EMOTIONS. BEFORE / AFTER — EM

Before. Confuees, overehalmed by data, stresed outo poor visibliity and nsiigets, deshbetes decisions.

10. YOUR SOLUTION — SL

ToyCraft Tales is a Tableau-based data visualization solution that transforms raw toy manufacturing. data into interactive dashboards. It integrates production, sales, inventory, and quaiity data to provide clear insights, end-bling manufacturers to monitor performance, identify

4. EMOTIONS: BEFORE / AFTER — EM

Before: Confused, overwhelmed by data, ea, stressed due to poor visibliity and delayed decisions.

After ⅔- — EM

Confident, informed, and in control with clear visual insights and data-driven decisions.

8. CHANNELS of BEHAVIOUR — CH

8.1.ONLINE

Customers analyze production and sales reports using Tableau dashboards, digital analytics tools, and online data reports.

8.2 OFFLINE

Customers discuss insights during management meetings, production planning sessions, and business review discussions.

10. YOUR SOLUTION — SL

ToyCraft Tales is a Tableau-based data visualization solution that transforms raw toy manufacturing data into interactive dashboards. It integrates production, sales, inventory, and quaiity data to provide clear insights, and-bling manufacturers to monitor performance, identify issues early, and make faster, data-driven decisions.
