Ideation Phase
Define the Problem Statements

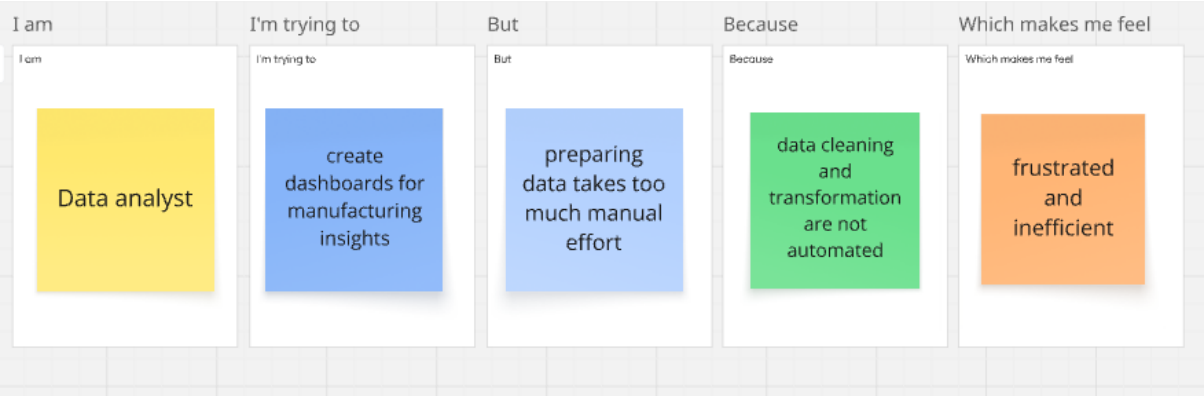
Date	04 February 2026
Team ID	LTVIP2026TMIDS81710
Project Name	ToyCraft Tales: Tableau's Vision Into Toy Manufacturer Data
Maximum Marks	2 Marks

Customer Problem Statement :

Toy manufacturing companies generate large amounts of production, inventory, sales, and quality data, which is often stored in raw formats like Excel files or databases. This makes analysis difficult and time-consuming for business users. The project focuses on collecting manufacturing data, storing it in an SQL database, and performing data preprocessing using SQL queries. The processed data is then connected to Tableau to create dashboards and story visualizations. These visualizations help users understand trends, performance, and insights easily. The system simplifies data analysis and supports better business decision-making.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:



Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Business user	analyze toy manufacturing performance data	the data is stored in multiple raw files	there is no centralized database or visualization system	confused and time-consuming to understand reports
PS-2	Data analyst	create dashboards for manufacturing insights	preparing data takes too much manual effort	data cleaning and transformatio n are not automated	frustrated and inefficient
